22″ RIDE-ON AUTO-SCRUBBER

JVC56RIDERN

Ride-On Scrubber

24 V · 60 L tanks · Batteries and charger included

Order code **JVC56RIDERN** · UPC 628383181958

A rider that fits where riders usually don't. Twenty-three inches across the body with a 22-inch scrub path and sixty-litre tanks front and back — the productivity of a ride-on in a footprint that still clears a standard double door.

- **Gets the operator off their feet.** A seated operator covers more ground per shift than a walk-behind, and stays fresher doing it — the whole reason to step up to a rider.
- **Arrives ready to work.** Two 12 V 120 Ah batteries, intelligent charger, 22″ brush, pad holder and squeegee all in the box. Nothing else to quote.
- **60 litres in, 60 litres out.** Equal solution and recovery tanks mean you fill once and dump once, instead of chasing a drain mid-shift.
- **Industrial-duty hardware.** 550 W brush motor, 550 W vacuum motor, key-switch start, V-shape squeegee and an amber beacon fitted as standard.

22″	15.85 gal	3.5 hr	58 dB	463 lb
SCRUB PATH	EACH TANK	WORKING AUTONOMY	NOISE	WEIGHT
560 mm	60 L solution & recovery	24 V · 120 Ah	± 3 dB	210 kg

Key-switch dash
Battery meter with hour timer, emergency stop and everything within thumb reach of the wheel.

30⅜″ V-shape squeegee
Eight inches wider than the scrub path, on castors — it tracks through turns without skipping.

23¼″ across the body
Narrow for a ride-on — aisles, doorways and elevators that rule out a bigger machine.

Beacon and open fill
Amber beacon standard for shared floors; a wide fill opening you can get a hose into.

WHERE IT EARNS ITS KEEP

Warehouse & distribution
Long runs between racking where a walk-behind burns the shift.

Manufacturing
Production aisles and lunchrooms on the same machine, same pass.

Big-box retail
Wide aisles overnight, and a body narrow enough for the back of house.

Arenas & rec centres
Concourses, change rooms and corridors between bookings.

Quotes, demos and same-week service.
Guelph-based. We sell it, we stock the parts, and we fix it.

SUPPLIED WITH

- Two 12 V 120 Ah CHILWEE batteries (24 V)
- Intelligent charger
- 22″ (560 mm) brush
- Pad holder and pad cover
- 30⅜″ (770 mm) V-shape squeegee
- Ignition key, brush lever, squeegee lever
- 5″ non-marking wheels

What it really covers

The published 36,166 ft²/h is a theoretical rate at full travel speed. **Our working estimate is 16,900–24,100 ft²/h (1,570–2,240 m²/h)** — a 22″ path at 4–5 km/h with 70–80% coverage once you allow for turns, aisle ends and refills. Estimate, not a published rating. Size the machine on this number.

When a rider beats a walk-behind

Roughly 25,000 ft² per shift is the crossover. Below it, a walk-behind is cheaper to buy and easier to store. Above it, the seated operator and the bigger tanks win back more labour than the machine costs. Tell us the square footage and we'll do the arithmetic with you.

One fill, one dump

60 litres each side is a lot of water for a 22″ machine, and solution and recovery are matched. That means a long run without hunting for a drain, and a recovery tank that won't cut the shift short before the solution does.

Parts and service from Guelph

We stock pads, brushes and squeegee blades and we service what we sell — no crating a rider back to a distributor and waiting.

WARRANTY

2 yr
Standard machine warranty, as published by Johnny Vac.

6 mo
Batteries. Charge and water discipline matters — see the operator guide.

Wear items
Brushes, pads, squeegee blades and filters are consumables, not warranty.

Service local
Warranty and non-warranty work handled out of our Guelph shop.

Warranty terms as published by Johnny Vac at time of print. Confirm current terms with Nika Sales before order.

BEFORE YOU ORDER — FOUR THINGS WORTH CHECKING

The narrowest door
23¼″ across the body, but the squeegee is 30⅜″ and swings wide. Measure doors and elevator cars on the route.

Charging point
Batteries charge on board. You need a dedicated outlet and floor space where the machine parks overnight.

Fill and dump
60 L in and 60 L out. A drain and a hose bib near the route saves more time than any spec on this sheet.

Who rides it
463 lb of machine at a walking-plus pace. Operators need a short orientation before first shift.

CONSUMABLES — KEEP THESE ON THE SHELF

22″ brush
Supplied with the machine. A spare keeps the unit working while the first one is worn or soaking.

Pad holder & pads
Pad holder and cover are included; 22″ pads in black, green, red and white are stocked by Nika.

Squeegee blades
The 30⅜″ V-blade is the fastest-wearing part on any scrubber. Order a set with the machine.

Recovery filter
Rinse every fill, replace on schedule — a blocked filter is the usual reason a scrubber stops drying.

Ready to see one run on your floor?
Book an on-site demo, or ask for a written quote the same day.
